COMPANY HISTORY

Sunshine Boreholes (Z) limited was registered by a team of knowledgeable entrepreneurs in the water well drilling and mining sector with the sole purpose of providing professional service in the water well drilling and mining sector. The Sunshine Boreholes (Z) limited is structured to provide the highest standards and professionalism, backed by a commitment to quality, integrity, and impartiality for the client.

With these as the principle guidelines, the programmed plan is to establish an all-inclusive water service facility under one roof from search for to exploitation which would also include the supply and servicing of all items related to water and minerals.

WHAT WE DO

Sunshine Boreholes (Z) limited is in a position to provide the following services:

- ◆ Drilling of 100-400mm diameter (4"- 16") borehole/s on selected sites by DTH (down-the-hole) technique to the required depth and casing the drilled hole in the accepted manner;
- ◆ Sitting of boreholes using state-of-the-art geophysical techniques;
- ◆ Undertaking water quality tests
- ◆ Undertaking of pump tests, and where required installation and commissioning of all types of pumps and Tank stands erection
- ◆ Provision of blast holes, exploratory holes, monitoring holes and dewatering facility for pits, pools and mines;
- ◆ Provision of earth moving equipment for storage tanks and related activity.

BUSINESS OBJECTIVE

Sunshine Boreholes (Z) limited seeks to be the leading and ultimate drilling Company, in providing safe and clean water by using the experts in this field who are knowledgeable and dedicated with the motto "Service Truly Personalized". And have been in this business for the past 20 years in India.

BUSINESS MISSION

Our Mission is to reach out to all clients in rural and urban areas and to provide safe clean drinking water to all Zambians.

MARKETING STRATEGY

The Zambian population is largely rural with a growing influx to urban areas. The distribution of the population is a long line of rail, the main artery roads and urban centers which are all situated on watersheds, i.e. away from river courses. The country receives modest seasonal rainfall and is well drained by two major river basin and several sub basins. The catchment's areas coupled with extensive watersheds offer good potential for water underground. The major perennial river systems are unevenly distributed in the wide expansive elevated plateau that constitutes the landmass of Zambia.

The lack of surface water for domestic use and irrigation for small plots in areas where most needed have to be addressed if satisfactory results are to be secured. This is where search and exploitation of underground water comes of value. This aspect has to be outlined to planners and developers so that productive outcome ensues.
